IQRA RAFIQ

Full Stack Developer

+92 316 0107320 | iqrarafiq680@gmail.com | Karachi, Pakistan

SUMMARY

Full Stack Developer with experience building enterprise-grade healthcare applications across the full development lifecycle, including frontend interfaces, backend services, API integrations, authentication, and workflow automation. Skilled in React.js, Next.js, Node.js, and PostgreSQL, with a track record of delivering role-based, real-time systems for multi-stakeholder platforms. Additional experience across React Native, Angular, and Python supporting cross-functional development needs.

EXPERIENCE

Full Stack Developer 11/2023 - 10/2025

Nixaam LLC

Worked on enterprise healthcare applications serving hospitals, radiologists, physicians, administrators, and patients, contributing across frontend development, backend services, API integrations, authentication flows, and healthcare workflow automation.

XRAD - Cloud-Based Medical Imaging Platform

- Developed and maintained frontend modules using React.js, integrating REST APIs for DICOM viewer functionality, patient imaging records, diagnostic workflows, and reporting.
- Built role-based dashboards supporting Radiologists, Physicians, Hospitals/Centers, Administrators, and Patients, with secure authentication and authorization for each healthcare role.
- Developed reusable React components to improve maintainability and consistency, and collaborated closely with backend engineers to integrate imaging services and optimize performance.
- Improved user experience by optimizing complex medical data visualization interfaces.

XEHR - Electronic Health Record System

- Contributed to a comprehensive EHR platform built with Next.js, React.js, Node.js, and PostgreSQL, developing modules for patient management, doctor portals, telehealth consultations, appointment scheduling, billing, and administrative operations.
- Implemented real-time patient queue management using Socket.IO, enabling live appointment tracking and doctor queue updates.
- Integrated backend APIs for patient records, consultations, prescriptions, billing, and healthcare workflows, and built responsive, role-based dashboards for multiple healthcare stakeholders.
- Improved application responsiveness and overall workflow efficiency for healthcare professionals.

Face Recognition System

- Built the frontend using React.js and integrated facial recognition APIs with backend services for an attendance and identity verification system.
- Worked with Node.js and Python backend services for image processing and identity verification workflows, implementing secure API communication between frontend and facial recognition services.
- Debugged backend services and optimized API response handling.

Python Contributions

- Developed and maintained multilingual email templates using Python for English and Arabic communications.
- Assisted with backend functionality and Python-based services as part of cross-functional development tasks, collaborating with backend developers on API integrations and system enhancements.

React Native Developer

Personal Project - Social Networking Mobile Application (Singapore)

Designed, developed, deployed, and maintained a complete social networking mobile application for Singapore users.

- Developed the complete mobile application using React Native with a scalable and reusable component architecture, and designed backend services using Node.js and Express.js.
- Designed and managed the MongoDB database architecture for user profiles, messaging, subscriptions, and application data, and implemented real-time chat functionality using Socket.IO.
- Developed swipe-based matching interfaces with premium and standard user functionality, and integrated Singpass Authentication (OIDC with MyInfo v4) for secure identity verification.
- Implemented Google Play Billing for subscription management and in-app purchases, along with push and in-app notification systems and analytics tracking for user engagement.
- Developed scheduled background processes using Cron Jobs, designed authentication and authorization workflows, and deployed and maintained backend infrastructure on AWS (Singapore Region).

Angular Developer

Freelance Project

Worked on the frontend development of a business web application using Angular and Kendo UI, focusing on responsive user interfaces and seamless backend integration.

- Developed responsive and interactive user interfaces using Angular and Kendo UI components, building reusable UI components and maintaining consistent design patterns across the application.
- Integrated REST APIs to display and manage dynamic data, working with forms, data grids, tables, filtering, and validation using Kendo UI.
- Fixed UI bugs, improved application usability, and optimized frontend performance, and participated in testing and debugging to ensure a stable, user-friendly experience.
- Followed clean coding practices and version control workflows using Git.

Technologies: Angular, TypeScript, Kendo UI, REST APIs, HTML5, CSS3, Git

EDUCATION

Masters in Data Science 2026 - Continue

Muhammad Ali Jinnah University

Bachelors in Software Engineering 2020 - 2024

Sindh Madarsatul Islam University

HSC 2017 - 2019

Govt. Girls Degree College Zamzama

SKILLS

React.js, Next.js, Node.js, Express.js, MongoDB, PostgreSQL, React Native, Angular, TypeScript, JavaScript, REST API Integration, Socket.IO / WebSockets, JWT Authentication & Authorization, DICOM Integration, Redux, Kendo UI, Git/SVN, Python, Google Play Billing, Cron Jobs, CSS Frameworks, Debugging & Testing
